## PROJECTION MAPPING CONTENT

### Time Voyage - A Light Path of Memories

Travel through time from roughly 150 years ago, when Japan's very first seaside railway ran across the water, to the present, and into a future 100 years from now, tracing the history and memories built in this place. One day, a ticket arrives, marking the beginning of a journey through Takanawa's history and the evolution of mobility. This journey is brought to life through projection mapping that uses advanced technology to make images move through space, synchronized with fountains throughout the venue to create a three-dimensional spatial experience. From Takanawa—a place shaped by countless challenges—a new experiential journey begins.

### The TAKANAWA

The everyday ambient sounds of Takanawa blend together and resonate with music, visuals, light, and space, creating a new work that brings Takanawa to life in three dimensions. Accompanied by sounds born from human activity, culture, and technological progress, this experience invites you to rediscover a place that has layered its history over time—and to imagine it continuing to exist here 100 years into the future.

## SPECIAL CONTENT

### LUMINOUS GATEWAY

A corridor of light drifting through Takanawa, woven from light and smoke. More than a simple three-dimensional artwork, it transforms the pathway itself into part of the experience. The light shifts and changes with every step, bringing a new sense of depth to the Takanawa landscape. It reveals new expressions, adding a new sense of depth to the Takanawa landscape.
